Molecular Sciences

European Association for Chemical and Molecular Sciences

EuCheMS is a not-for-profit organisation that brings together chemistry related organisations throughout Europe to provide a single voice on key science and policy issues, based on expert knowledge.

42 Member
Societies
in 32 countries

12 Divisions
5 Working
Parties

European
Young
Chemists'
Network

Chemistry

European Association for Chemical and Molecular Sciences

- Improvement of resource and energy efficiency of chemical processes.
- Minimization of waste and emissions of CO₂.
- “Greener” chemistry.
- More attention to availability and sources of raw materials.
- New synthesis methods necessary.
- Development of alternatives for scarce raw materials.
- New or improved approaches for recycling and recovery of materials.

European Association for Chemical and Molecular Sciences

- Society depends on some critical chemicals.
- The general attitude towards chemistry must be changed.
- More and better knowledge-oriented chemical research is necessary.
- Strengthening of the research infrastructure; intensification of science education.
- Re-think chemistry curricula; stop trend towards hyperspecialization.

European Association for Chemical and Molecular Sciences

European Sustainable Chemistry Award

2010: Matthias Beller, Germany
2012: Marc Taillefer, France
