

EuChemS Division of Organic Chemistry Award for Research

Introduction

Every two years, the EuChemS Division of Organic Chemistry Award for Research acknowledges the exceptional achievements of one scientist working in the field of organic chemistry in Europe.

Nomination

Nominees should be scientists who have made outstanding contributions to the field of organic chemistry and have significantly advanced our understanding of a particular aspect of our discipline. The Award is not meant to be for lifetime achievements. The research can cover any area of organic chemistry. The nominee should be based in a country with a EuChemS member organisation at the time of the nomination.

Nominations for the EuChemS Division of Organic Chemistry Award for Research can be submitted from October 1 to December 31 through a web form. The online nomination form requests at least the following information:

- Nomination letter
- Nominee's CV (max. three pages)

There is no requirement for the nominator to be a member of EuChemS member organisations. Self-nominations are not accepted. Nominators should take diversity in all its forms into consideration, as well as parental leave or other relevant career breaks.

Selection and award presentation

The selection is performed by the Societies Representatives of the Organic Chemistry Division Board, who will evaluate the nominees and decide through voting to whom the EuChemS Division of Organic Chemistry Award for Research will be awarded. The award is announced on the EuChemS Division of Organic Chemistry website by April 30.

Note: the EuChemS Division of Organic Chemistry Award for Research and the EuChemS Female Organic Chemist of the Year are both biennial awards and are awarded in alternate years.
