

EuChemS Female Organic Chemist of the Year

Introduction

Every two years, the EuChemS Female Organic Chemist of the Year Award acknowledges the excellent research work carried out by a female scientist working in the field of organic chemistry in Europe.

Nomination

Nominees should be female scientists who have made outstanding contributions to the field of organic chemistry and have significantly advanced our understanding of a particular aspect of our discipline. The Award is not meant to be for lifetime achievements. The research can cover any area of organic chemistry. The nominee should be based in a country with a EuChemS member organisation at the time of nomination.

Nominations for the EuChemS Female Organic Chemist of the Year Award can be submitted from October 1 to December 31 through a web form. The online nomination form requests at least the following information:

- Nomination letter
- Nominee's CV (max. three pages)

There is no requirement for the nominator to be a member of EuChemS member organisations. Self-nominations are not accepted. Nominators should take diversity in all its forms into consideration, as well as parental leave or other relevant career breaks.

Selection and award presentation

The selection is performed by the Societies Representatives of the Organic Chemistry Division Board, who will evaluate the nominees and decide through voting to whom the EuChemS Female Organic Chemist of the Year will be awarded. The award is announced on the EuChemS Division of Organic Chemistry website by April 30.

Note: the EuChemS Division of Organic Chemistry Award for Research and the EuChemS Female Organic Chemist of the Year are both biennial awards and are awarded in alternate years
